ABOUT

As an Oklahoma-licensed landscape architect, Carl's mission is to provide architects and civil engineers with professional site and landscape architecture consulting services that both economically and sustainably meet your client's project goals. With five years of experience as an in-house consultant at a large regional architecture firm, he has a keen understanding of the pressures put on an architectural design team by its clients. This understanding means that I recognize your pain points as architects and prioritize your design needs to develop the best site for your client's program and budget. As a landscape architecture consultant, O'BRIEN|SiteArchitecture can provide you with progressive site design solutions from conceptual sketches/graphics to construction documentation and, construction observation.
